

**Winner of the 2016 Comp Laude™ Award for Pharmacist is Dawn Getchell.**

Dawn Getchell joined Injured Workers' Pharmacy (IWP), a specialty home delivery pharmacy, in September of 2009 as a self-motivated and service-oriented pharmacist with a passion for facilitating the healing process of patients. Proficient in clinical pharmacology and patient medication therapy management, Getchell demonstrates strength in drug utilization review.

As *THE* Patient Advocate Pharmacy, IWP strives to provide better outcomes for all by providing pharmacy care and support to those who are injured in accidents. In her role as a clinical pharmacist with IWP, Dawn has worked over the years to develop the organization's unique Patient Care and Advocacy Program (PCAP) which allows pharmacists to enhance communication with patients and physicians. PCAP allows pharmacists to work collaboratively with physicians and medical providers to create the safest and most effective treatment plans for patients, thus minimizing the risk of additional health complications and improving the overall quality of life for patients.

Dawn also serves as an advocate for better outcomes outside of IWP. She has strong ties to the Juvenile Diabetes Foundation and to date has raised over \$60,000.00 with her fundraising efforts. She even participates yearly in events supporting the JDRF Boston One Walk. A strong role model both inside and out of IWP, Dawn has also been recognized for her efforts by both her peers and the industry with the IWP Award for Motivation and the CVS Paragon Award.

Getchell reflects, "I became a Pharmacist to help patients improve their quality of life. It means a great deal to me to be able to provide personalized care to our patients. As *THE* Patient Advocate Pharmacy, patients are our top priority and providing the best possible care is what motivates me. Working collaboratively with patients and their healthcare teams we strive to do what is right by creating the safest and most effective treatment plans for our patients and provide better outcomes for all."
